ethical ad by CodeFund

Example

```
#!/usr/bin/env bash

NAME="John"
echo "Hello $NAME!"
```

Variables

```
NAME="John"
echo $NAME
echo "$NAME"
echo "${NAME}!"
```

String quotes

```
NAME="John"
echo "Hi $NAME"    #=> Hi John
echo 'Hi $NAME'    #=> Hi $NAME
```

Conditional execution

```
git commit && git push
git commit || echo "Commit failed"
```

Conditionals

```
if [[ -z "$string" ]]; then
    echo "String is empty"
elif [[ -n "$string" ]]; then
    echo "String is not empty"
fi

See: Conditionals
```

Functions

```
get_name() {
    echo "John"
}

echo "You are $(get_name)"

See: Functions
```

Shell execution

```
echo "I'm in $(pwd)"
echo "I'm in `pwd`"
# Same

See Command substitution
```

Brace expansion

```
echo {A,B}.js

{A,B}                Same as A B

{A,B}.js             Same as A.js B.js

{1..5}               Same as 1 2 3 4 5

See: Brace expansion
```

Strict mode

```
set -euo pipefail
IFS=$'\n\t'

See: Unofficial bash strict mode
```

Parameter expansions

Basics

```
name="John"
echo ${name}
echo ${name/J/j}    #=> "john" (substitution)
echo ${name:0:2}    #=> "Jo" (slicing)
echo ${name::2}     #=> "Jo" (slicing)
echo ${name::-1}    #=> "Joh" (slicing)
echo ${name:~-1}    #=> "n" (slicing from right)
echo ${name:~-2:1}  #=> "h" (slicing from right)
echo ${food:-Cake}  #=> $food or "Cake"

length=2
echo ${name:0:length}    #=> "Jo"

See: Parameter expansion

STR="/path/to/foo.cpp"
echo ${STR%.cpp}    # /path/to/foo
echo ${STR%.cpp}.o  # /path/to/foo.o
echo ${STR%/*}      # /path/to

echo ${STR##*.}     # cpp (extension)
echo ${STR##*/}     # foo.cpp (basepath)

echo ${STR#*/}      # path/to/foo.cpp
echo ${STR##*/}     # foo.cpp

echo ${STR/foo/bar} # /path/to/bar.cpp

STR="Hello world"
echo ${STR:6:5}    # "world"
echo ${STR:-5:5}   # "world"

SRC="/path/to/foo.cpp"
BASE=${SRC##*/}    #=> "foo.cpp" (basepath)
DIR=${SRC%$BASE}   #=> "/path/to/" (dirpath)
```

Substitution

| | |
|-------------------------------|---------------------|
| <code>\${F00%suffix}</code> | Remove suffix |
| <code>\${F00#prefix}</code> | Remove prefix |
| <code>\${F00%suffix}</code> | Remove long suffix |
| <code>\${F00##prefix}</code> | Remove long prefix |
| <code>\${F00/from/to}</code> | Replace first match |
| <code>\${F00//from/to}</code> | Replace all |
| <code>\${F00/%from/to}</code> | Replace suffix |
| <code>\${F00/#from/to}</code> | Replace prefix |

Length

| | |
|-----------------------|-----------------|
| <code>\${#F00}</code> | Length of \$F00 |
|-----------------------|-----------------|

Default values

| | |
|-------------------------------|---|
| <code>\${F00:-val}</code> | \$F00, or val if unset (or null) |
| <code>\${F00:=val}</code> | Set \$F00 to val if unset (or null) |
| <code>\${F00:+val}</code> | val if \$F00 is set (and not null) |
| <code>\${F00:?message}</code> | Show error message and exit if \$F00 is unset (or null) |

Omitting the `:` removes the (non)nullity checks, e.g.
`${F00-val}` expands to `val` if unset otherwise `$F00`.

Comments

```
# Single line comment

: '
This is a
multi line
comment
'
```

Substrings

| | |
|-----------------------------|------------------------------|
| <code>\${F00:0:3}</code> | Substring (position, length) |
| <code>\${F00:(-3):3}</code> | Substring from the right |

Manipulation

```
STR="HELLO WORLD!"
echo ${STR,,}    #=> "hello world!" (lowercase 1st)
echo ${STR,,,}   #=> "hello world!" (all lowercase)

STR="hello world!"
echo ${STR^}     #=> "Hello world!" (uppercase 1st)
echo ${STR^^}    #=> "HELLO WORLD!" (all uppercase)
```

Loops

Basic for loop

C-like for loop

Ranges

```
for i in /etc/rc.*; do
    echo $i
done
```

Reading lines

```
cat file.txt | while read line; do
    echo $line
done
```

```
for ((i = 0 ; i < 100 ; i++)); do
    echo $i
done
```

Forever

```
while true; do
    ...
done
```

```
for i in {1..5}; do
    echo "Welcome $i"
done

With step size

for i in {5..50..5}; do
    echo "Welcome $i"
done
```

Functions

Defining functions

```
myfunc() {
    echo "hello $1"
}

# Same as above (alternate syntax)
function myfunc() {
    echo "hello $1"
}

myfunc "John"
```

Returning values

```
myfunc() {
    local myresult='some value'
    echo $myresult
}

result="$(myfunc)"
```

Arguments

| | |
|-------------------------|---------------------------------------|
| \$# | Number of arguments |
| \$* | All arguments |
| \$@ | All arguments, starting from first |
| \$1 | First argument |
| \$_ | Last argument of the previous command |
| See Special parameters. | |

Raising errors

```
myfunc() {
    return 1
}

if myfunc; then
    echo "success"
else
    echo "failure"
fi
```

Conditionals

Conditions

| | |
|---|--------------------------|
| Note that [[is actually a command/program that returns either 0 (true) or 1 (false). Any program that obeys the same logic (like all base utils, such as grep(1) or ping(1)) can be used as condition, see examples. | |
| [[-z STRING]] | Empty string |
| [[-n STRING]] | Not empty string |
| [[STRING == STRING]] | Equal |
| [[STRING != STRING]] | Not Equal |
| [[NUM -eq NUM]] | Equal |
| [[NUM -ne NUM]] | Not equal |
| [[NUM -lt NUM]] | Less than |
| [[NUM -le NUM]] | Less than or equal |
| [[NUM -gt NUM]] | Greater than |
| [[NUM -ge NUM]] | Greater than or equal |
| [[STRING =~ STRING]] | Regexp |
| ((NUM < NUM)) | Numeric conditions |
| More conditions | |
| [[-o noclobber]] | If OPTIONNAME is enabled |
| [[! EXPR]] | Not |
| [[X && Y]] | And |
| [[X Y]] | Or |

File conditions

| | |
|-----------------------|-------------------------|
| [[-e FILE]] | Exists |
| [[-r FILE]] | Readable |
| [[-h FILE]] | Symlink |
| [[-d FILE]] | Directory |
| [[-w FILE]] | Writable |
| [[-s FILE]] | Size is > 0 bytes |
| [[-f FILE]] | File |
| [[-x FILE]] | Executable |
| [[FILE1 -nt FILE2]] | 1 is more recent than 2 |
| [[FILE1 -ot FILE2]] | 2 is more recent than 1 |
| [[FILE1 -ef FILE2]] | Same files |

Example

```
# String
if [[ -z "$string" ]]; then
    echo "String is empty"
elif [[ -n "$string" ]]; then
    echo "String is not empty"
fi

# Combinations
if [[ X && Y ]]; then
    ...
fi

# Equal
if [[ "$A" == "$B" ]]

# Regex
if [[ "A" =~ . ]]

if (( $a < $b )); then
    echo "$a is smaller than $b"
fi

if [[ -e "file.txt" ]]; then
    echo "file exists"
fi
```

Arrays

Defining arrays

Working with arrays

```
Fruits=('Apple' 'Banana' 'Orange')

Fruits[0]="Apple"
Fruits[1]="Banana"
Fruits[2]="Orange"
```

Operations

```
Fruits=("${Fruits[@]}" "Watermelon")      # Push
Fruits+=( 'Watermelon' )                  # Also Push
Fruits=( ${Fruits[@]/Ap*/} )              # Remove by regex match
unset Fruits[2]                           # Remove one item
Fruits=("${Fruits[@]}")                   # Duplicate
Fruits=("${Fruits[@]}" "${Veggies[@]}")   # Concatenate
lines=(`cat "logfile"`)                  # Read from file
```

Bash scripting cheatsheet

```
echo ${Fruits[0]}      # Element #0
echo ${Fruits[-1]}     # Last element
echo ${Fruits[@]}      # All elements, space-separated
echo $#Fruits[@]       # Number of elements
echo ${#Fruits}        # String length of the 1st element
echo ${#Fruits[3]}     # String length of the Nth element
echo ${Fruits[@]:3:2}  # Range (from position 3, length 2)
```

Iteration

```
for i in "${arrayName[@]"; do
    echo $i
done
```

Dictionaries

Defining

```
declare -A sounds

sounds[dog]="bark"
sounds[cow]="moo"
sounds[bird]="tweet"
sounds[wolf]="howl"

Declares sound as a Dictionary object (aka associative array).
```

Working with dictionaries

```
echo ${sounds[dog]} # Dog's sound
echo ${sounds[@]}   # All values
echo ${!sounds[@]}  # All keys
echo $#sounds[@]    # Number of elements
unset sounds[dog]   # Delete dog
```

Iteration

```
Iterate over values

for val in "${sounds[@]"; do
    echo $val
done

Iterate over keys

for key in "${!sounds[@]"; do
    echo $key
done
```

Options

Options

```
set -o noclobber # Avoid overlay files (echo "hi" > foo)
set -o errexit   # Used to exit upon error, avoiding cascading errors
set -o pipefail  # Unveils hidden failures
set -o nounset   # Exposes unset variables
```

Glob options

```
shopt -s nullglob # Non-matching globs are removed ('*.foo' => '')
shopt -s failglob # Non-matching globs throw errors
shopt -s nocaseglob # Case insensitive globs
shopt -s dotglob   # Wildcards match dotfiles ("*.sh" => ".foo.sh")
shopt -s globstar  # Allow ** for recursive matches ('lib/**/*.rb' => 'lib/.../.../...')

Set GLOBIGNORE as a colon-separated list of patterns to be removed from glob matches.
```

History

Commands

| | |
|---------------------|---|
| history | Show history |
| shopt -s histverify | Don't execute expanded result immediately |

Operations

| | |
|--|---|
| !! | Execute last command again |
| !!:s/<FROM>/<TO>/ | Replace first occurrence of <FROM> to <TO> in most recent command |
| !!:gs/<FROM>/<TO>/ | Replace all occurrences of <FROM> to <TO> in most recent command |
| !\$:t | Expand only basename from last parameter of most recent command |
| !\$:h | Expand only directory from last parameter of most recent command |
| !! and !\$ can be replaced with any valid expansion. | |

Expansions

| | |
|------------|--|
| !\$ | Expand last parameter of most recent command |
| !* | Expand all parameters of most recent command |
| !-n | Expand nth most recent command |
| !n | Expand nth command in history |
| !<command> | Expand most recent invocation of command <command> |

Slices

| | |
|---|--|
| !!:n | Expand only nth token from most recent command (command is 0; first argument is 1) |
| !^ | Expand first argument from most recent command |
| !\$ | Expand last token from most recent command |
| !!:n-m | Expand range of tokens from most recent command |
| !!:n-\$ | Expand nth token to last from most recent command |
| !! can be replaced with any valid expansion i.e. !cat, !-2, !42, etc. | |

Miscellaneous

Numeric calculations

```
$(a + 200) # Add 200 to $a
```

Subshells

```
$( (RANDOM%200) ) # Random number 0..200
```

Inspecting commands

```
command -V cd  
#=> "cd is a function/alias/whatever"
```

Trap errors

```
trap 'echo Error at about $LINENO' ERR  
  
or  
  
traperr() {  
    echo "ERROR: ${BASH_SOURCE[1]} at about ${BASH_LINENO[0]}"  
}  
  
set -o errtrace  
trap traperr ERR
```

Source relative

```
source "${0%/*}/../share/foo.sh"
```

Directory of script

```
DIR="${0%/*}"
```

Getting options

```
while [[ "$1" =~ ^- && ! "$1" == "--" ]]; do case $1 in  
-v | --version )  
    echo $version  
    exit  
    ;;  
-s | --string )  
    shift; string=$1  
    ;;  
-f | --flag )  
    flag=1  
    ;;  
esac; shift; done  
if [[ "$1" == "--" ]]; then shift; fi
```

Special variables

| | |
|-------------------------|------------------------------|
| <code>\$?</code> | Exit status of last task |
| <code>\$!</code> | PID of last background task |
| <code>\$\$</code> | PID of shell |
| <code>\$0</code> | Filename of the shell script |
| See Special parameters. | |

Grep check

```
if grep -q 'foo' ~/.bash_history; then  
    echo "You appear to have typed 'foo' in the past"  
fi
```

```
(cd somedir; echo "I'm now in $PWD")  
pwd # still in first directory
```

Redirection

```
python hello.py > output.txt # stdout to (file)  
python hello.py >> output.txt # stdout to (file), append  
python hello.py 2> error.log # stderr to (file)  
python hello.py 2>&1 # stderr to stdout  
python hello.py 2>/dev/null # stderr to (null)  
python hello.py &>/dev/null # stdout and stderr to (null)  
  
python hello.py < foo.txt # feed foo.txt to stdin for python
```

Case/switch

```
case "$1" in  
    start | up)  
        vagrant up  
        ;;  
  
    *)  
        echo "Usage: $0 {start|stop|ssh}"  
        ;;  
esac
```

printf

```
printf "Hello %s, I'm %s" Sven Olga  
#=> "Hello Sven, I'm Olga  
  
printf "1 + 1 = %d" 2  
#=> "1 + 1 = 2"  
  
printf "This is how you print a float: %f" 2  
#=> "This is how you print a float: 2.000000"
```

Heredoc

```
cat <<END  
hello world  
END
```

Reading input

```
echo -n "Proceed? [y/n]: "  
read ans  
echo $ans  
  
read -n 1 ans # Just one character
```

Go to previous directory

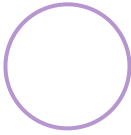

```
pwd # /home/user/foo  
cd bar/  
pwd # /home/user/foo/bar  
cd -  
pwd # /home/user/foo
```

Check for command's result

```
if ping -c 1 google.com; then  
    echo "It appears you have a working internet connection"  
fi
```
